Intellectual Property

Collateralized Perpetual & Term Smart Contracts

**IP Assets Staking**

**Intellectual Property  
Collateralized Perpetual & Term Smart Contracts  
(IP & Assets Term Staking Pools)**

---

The solution

The Eurasian Central Bank allows you to earn income by adding intellectual property (IP) assets to the service's smart contracts.

The mechanism (model) allows you to block digital assets and IP assets in the service's fixed-term and perpetual smart contracts (pools) and receive remuneration based on the annual percentage yield.

The platform allows you to evaluate intellectual property (IP) assets based on the number of digital assets and IP assets in smart contracts and their value, without having to sell the rights to intellectual property.

The service monetizes intangible assets using the IP Assets Staking & IP Assets Liquid Staking model (collateral mechanism).

Staking (collateral mechanism/smart contract/pool) in our service can be compared to depositing money into a savings account in a regular bank.

While your brand (intellectual property asset) is stored (locked) in smart contracts of our platform (bank), you earn money (interest).

In our bank, instead of a cash deposit (contribution), intellectual property assets are used.

Staking is a deposit of assets in a digital bank (smart contracts) based on blockchain technology and NFT.

Advantages of IP Assets Staking & IP Assets Liquid Staking (IP Time Smart Contracts / IP & Assets Term Staking Pools): Receiving passive income for placing a brand in a digital bank.
